GENERAL INFORMATION

MANUFACTURER

Manufacturer	Armourcoat Ltd
Address	Unit 2/3a, Morewood Close, Sevenoaks, TN132HU
Contact details	sales@armourcoat.co.uk
Website	www.armourcoat.com

EPD STANDARDS, SCOPE AND VERIFICATION

Program operator	EPD Hub, hub@epdhub.com
Reference standard	EN 15804+A2:2019 and ISO 14025
PCR	EPD Hub Core PCR version 1.0, 1 Feb 2022
Sector	Construction product
Category of EPD	Third party verified EPD
Scope of the EPD	Cradle to gate with options, A4-A5, and modules C1-C4, D
EPD author	Duncan Mackellar
EPD verification	Independent verification of this EPD and data, according to ISO 14025: <input type="checkbox"/> Internal certification <input checked="" type="checkbox"/> External verification
EPD verifier	H.N, as an authorized verifier acting for EPD Hub Limited

The manufacturer has the sole ownership, liability, and responsibility for the EPD. EPDs within the same product category but from different programs may not be comparable. EPDs of construction products may not be comparable if they do not comply with EN 15804 and if they are not compared in a building context.

PRODUCT

Product name	Armourcoat Perlata
Additional labels	Perlata Silver / Perlata Gold / Perlata Bronze / Basecolor Matt
Product reference	PLS / PLG / PLB
Place of production	UK
Period for data	2022
Averaging in EPD	No averaging
Variation in GWP-fossil for A1-A3	0 %

ENVIRONMENTAL DATA SUMMARY

Declared unit	1m ²
Declared unit mass	0.275 kg
GWP-fossil, A1-A3 (kgCO ₂ e)	2.06E-1
GWP-total, A1-A3 (kgCO ₂ e)	1.86E-1
Secondary material, inputs (%)	1.17
Secondary material, outputs (%)	0.0
Total energy use, A1-A3 (kWh)	0.995
Total water use, A1-A3 (m ³ e)	0.00375

PRODUCT AND MANUFACTURER

ABOUT THE MANUFACTURER

Armourcoat Ltd is a Manufacturer and supplier of luxury sustainable decorative surface finishes and performance coatings.

Armourcoat Ltd was incorporated in the UK in 1986 as a specialist manufacturer of ultra-hard plasters and renders for Squash and Rackets courts.

In 1990 Armourcoat diversified into a range of decorative plasters and paints and has become the leading company worldwide for specialist natural decorative plasters and sustainable decorative solutions.

Armourcoat has offices in the UK and USA and has agents and distributors in over 40 countries around the world. Armourcoat is fully accredited to ISO 9001, ISO 14001 and ISO 45001.

PRODUCT DESCRIPTION

Armourcoat Perlata is a water based decorative wall coating specially formulated with pearlescent pigments to create an elegant finish with a subtle surface shimmer. Perlata is available in a wide range of colours which are suitable for both modern and classical interiors.

The Perlata decorative coating comprises of a coat of Basecolor followed by two coats of Perlata.

Basecolor is a zero VOC, ultra-low Emissions high opacity base-coat primer that is used as part of the Perlata system.

Perlata Density - 1.24% +/- 0.05

Perlata Viscosity 15000 -25000 cps

Perlata Solids content 45.5 +/-1%

Basecolor Density 1.52 +/- 0.05

Basecolor Viscosity 2500-4000 cps

Basecolor Solids Content 58% +/- 1%

Further information can be found at www.armourcoat.com.

PRODUCT RAW MATERIAL MAIN COMPOSITION

Raw material category	Amount, mass- %	Material origin
Water	48	UK
Minerals	37	UK/EU
Fossil materials	14.75	UK/EU

BIOGENIC CARBON CONTENT

Product's biogenic carbon content at the factory gate

Biogenic carbon content in product, kg C	0
Biogenic carbon content in packaging, kg C	0.0027

FUNCTIONAL UNIT AND SERVICE LIFE

Declared unit	1m2
Mass per declared unit	0.275 kg
Functional unit	To decorate 1m2 of substrate with one coat of Basecolor and two coats of Perlata, equivalent to 0.275kg of products
Reference service life	20 years

SUBSTANCES, REACH - VERY HIGH CONCERN

The product does not contain any REACH SVHC substances in amounts greater than 0,1 % (1000 ppm).

PRODUCT LIFE-CYCLE

SYSTEM BOUNDARY

This EPD covers the life-cycle modules listed in the following table.

Product stage			Assembly stage		Use stage							End of life stage				Beyond the system boundaries		
A1	A2	A3	A4	A5	B1	B2	B3	B4	B5	B6	B7	C1	C2	C3	C4	D		
x	x	x	x	x	MND	MND	MND	MND	MND	MND	MND	x	x	x	x	x		
Raw materials	Transport	Manufacturing	Transport	Assembly	Use	Maintenance	Repair	Replacement	Refurbishment	Operational energy use	Operational water use	Deconstr./demol.	Transport	Waste processing	Disposal	Reuse	Recovery	Recycling

Modules not declared = MND. Modules not relevant = MNR.

MANUFACTURING AND PACKAGING (A1-A3)

The environmental impacts considered for the product stage cover the manufacturing of raw materials used in the production as well as packaging materials and other ancillary materials. Also, fuels used by machines, and handling of waste formed in the production processes at the manufacturing facilities are included in this stage. The study also considers the material losses occurring during the manufacturing processes as well as losses during electricity transmission.

Perlata And Basecolor are manufactured in the UK by Armourcoat Ltd. Armourcoat is fully accredited to ISO 9001, ISO14001, ISO 45001 and operates strict quality control procedures in the manufacture of all products.

The raw materials are checked, accurately weighed and mixed in batches in a specialist high shear mixer.

Each batch is allocated a specific batch number and a quality control check are performed on every batch.

Perlata is then packed into 6kg units using a vacuum packing dispenser.

Basecolor is packed into 5 litre units.

Finished product is packed onto a Euro pallet and stretch wrapped ready for warehouse storage.

All packaging (stretch wrap) and raw material packaging that fall below the 1% of mass threshold have been excluded for this study.

Pallets are based on a reuse scenario of two times. Most of the perlata orders are between 2- 20 units and therefore are not always sent out on a pallet and the pallets are recycled back to manufacture production.

TRANSPORT AND INSTALLATION (A4-A5)

Transportation impacts occurred from final products delivery to construction site (A4) cover fuel direct exhaust emissions, environmental impacts of fuel production, as well as related infrastructure emissions.

Perlata and Basecolor are manufactured in our UK Factory and transported by road for projects in the UK.

For UK projects the transportation distance is defined according to PCR norm.

Average distance of transportation from Armourcoat Ltd to building site is assumed as 100 km and the transportation method is assumed to be lorry. The material is hand applied by roller for the Basecolor and roller and trowel for the Perlata and therefore no additional energy or material is required in the application process.

It is estimated that 2% of the material is wasted in the application and this has been allocated to landfill.

Plastic buckets are assumed as single use and are sent for to waste disposal.

waste from Wooden pallets and buckets are assumed to be incinerated for generation of heat and electricity.

PRODUCT USE AND MAINTENANCE (B1-B7)

Perlata can be cleaned with a mild detergent. Perlata is very easy to patch and repair due to the natural tonal variations inherent in the finish. If the surface becomes badly scuffed the surface can be lightly sanded and a final pattern coat re-applied to the surface.

At the end of the installation phase a small quantity is left with the client for subsequent repairs if required. Provided it is kept in a sealed airtight container and stored in a cool environment it will remain usable for patch repairs for many years. The fact that it can be readily repaired significantly increases the useful life of the product.

No assumption has been made that the surface will be damaged and therefore the use stage (B1-B7) is outside the scope of this EPD.

Air, soil, and water impacts during the use phase have not been studied.

PRODUCT END OF LIFE (C1-C4, D)

Armourcoat Perlata forms a thin (50 -100um) layer on the substrate to which it is applied. It is impractical to remove it and therefore it is assumed that it will be recycled or disposed of at end of life along with the plasterboard substrate.

The consumption of energy and natural resources is negligible for the removal of the plasterboard, so the impacts of demolition are assumed zero (C1).

In the UK our products are approved for recycling with the plasterboard substrate.

It is assumed that the waste will be transported to the nearest construction waste recycling plant.

Countrystyle Ridham Recycling centre is 80km from central London (C2).

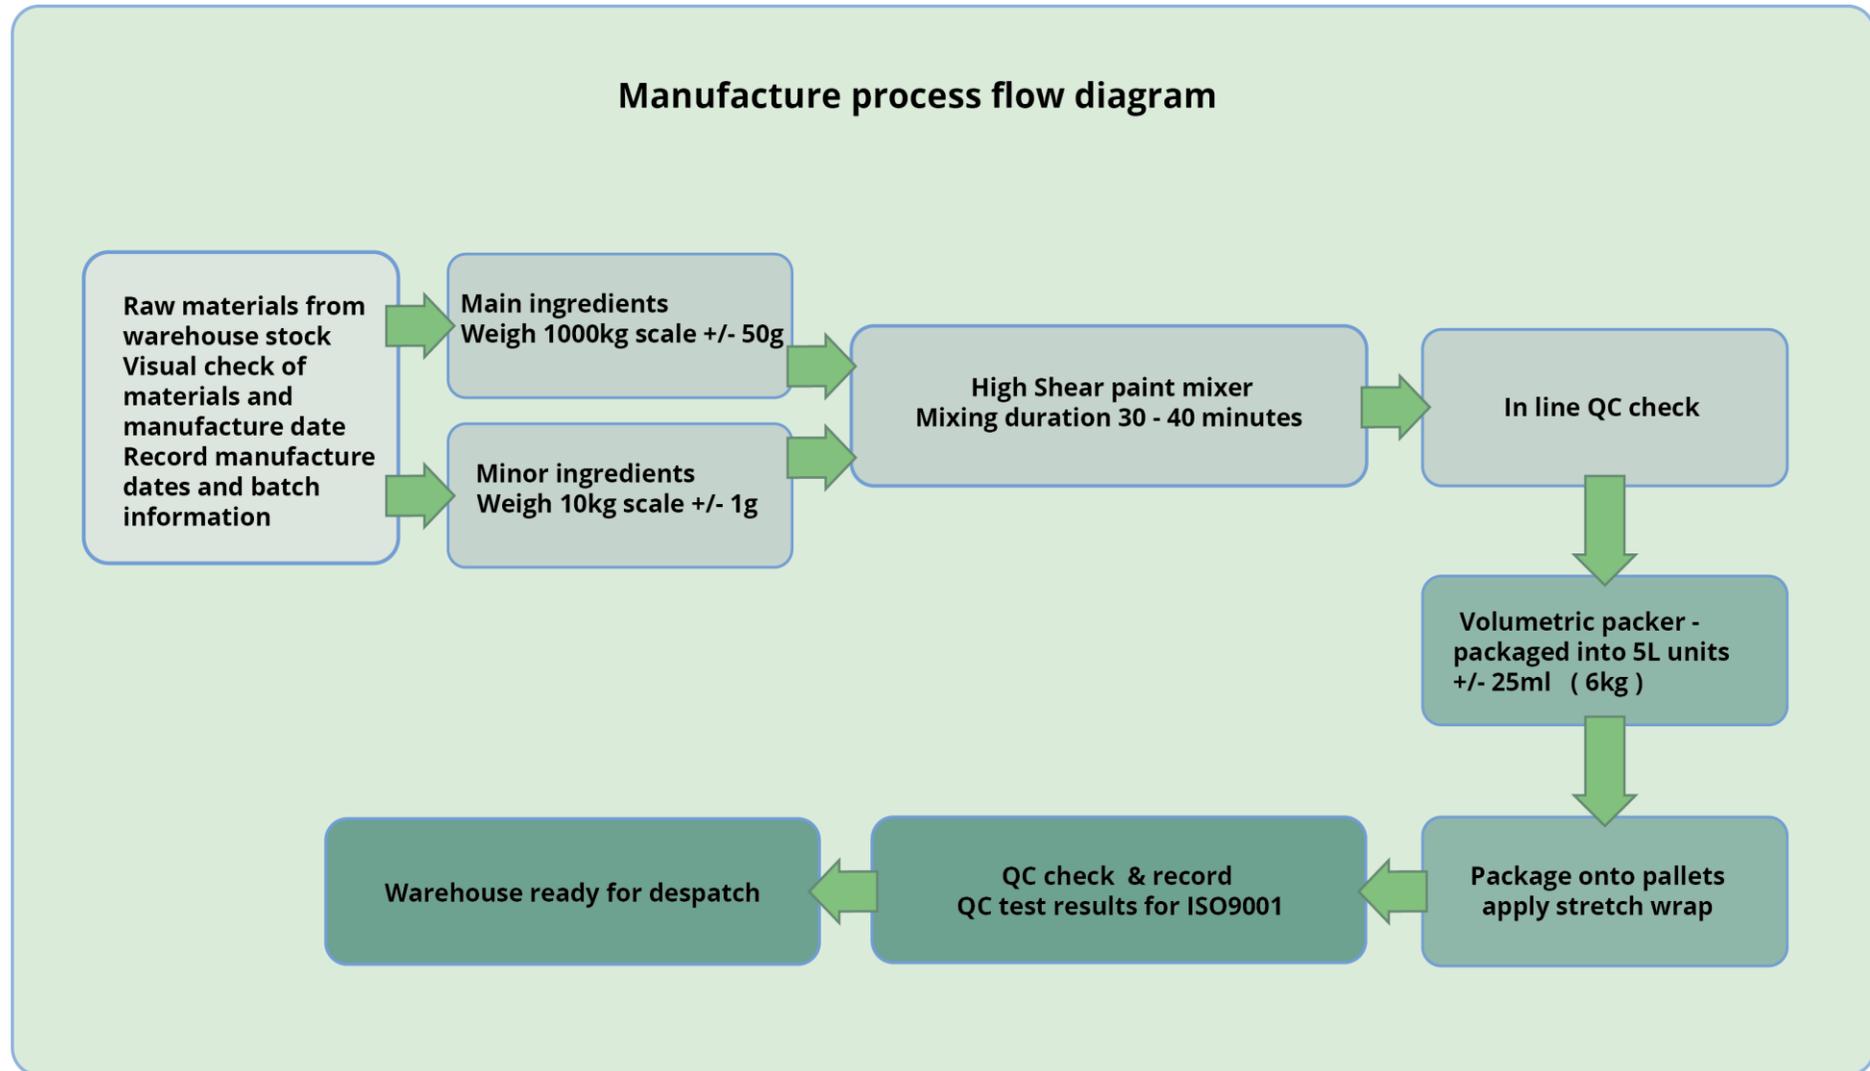

There is no waste processing for reuse, recovery or recycling of the actual Perlata product (C3).

Plasterboard is the most commonly used substrate for both commercial and residential projects and it is therefore assumed that it is likely to be treated as gypsum waste along with the plasterboard substrate. The dry

mass of the product at end of life is 0.0143 kg and it is assumed that this will be extracted during the plasterboard recycling process and sent to landfill (C4).

Wooden pallets and buckets are incinerated for generation of heat and electricity (D).

MANUFACTURING PROCESS

LIFE-CYCLE ASSESSMENT

CUT-OFF CRITERIA

The study does not exclude any modules or processes which are stated mandatory in the reference standard and the applied PCR. The study does not exclude any hazardous materials or substances. The study includes all major raw material and energy consumption. All inputs and outputs of the unit processes, for which data is available for, are included in the calculation. There is no neglected unit process more than 1% of total mass or energy flows. The module specific total neglected input and output flows also do not exceed 5% of energy usage or mass.

ALLOCATION, ESTIMATES AND ASSUMPTIONS

Allocation is required if some material, energy, and waste data cannot be measured separately for the product under investigation. All allocations are done as per the reference standards and the applied PCR. In this study, allocation has been done in the following ways:

Data type	Allocation
Raw materials	Allocated by mass or volume
Packaging materials	No allocation
Ancillary materials	No allocation
Manufacturing energy and waste	Allocated by mass or volume

AVERAGES AND VARIABILITY

Type of average	No averaging
Averaging method	Not applicable
Variation in GWP-fossil for A1-A3	0 %

Perlata is manufactured in three different base colours of white pearl, gold pearl and Bronze Pearl.

The formulation and mixing process is identical for all three colours and the only difference is the colour of the pearlescent mica.

The GWP and environmental impact is therefore the same for all products.

LCA SOFTWARE AND BIBLIOGRAPHY

This EPD has been created using One Click LCA EPD Generator. The LCA and EPD have been prepared according to the reference standards and ISO 14040/14044. Ecoinvent and One Click LCA databases were used as sources of environmental data.

VERIFICATION STATEMENT

VERIFICATION PROCESS FOR THIS EPD

This EPD has been verified in accordance with ISO 14025 by an independent, third-party verifier by reviewing results, documents and compliancy with reference standard, ISO 14025 and ISO 14040/14044, following the process and checklists of the program operator for:

- This Environmental Product Declaration
- The Life-Cycle Assessment used in this EPD
- The digital background data for this EPD

Why does verification transparency matter? Read more online
This EPD has been generated by One Click LCA EPD generator, which has been verified and approved by the EPD Hub.

THIRD-PARTY VERIFICATION STATEMENT

I hereby confirm that, following detailed examination, I have not established any relevant deviations by the studied Environmental Product Declaration (EPD), its LCA and project report, in terms of the data collected and used in the LCA calculations, the way the LCA-based calculations have been carried out, the presentation of environmental data in the EPD, and other additional environmental information, as present with respect to the procedural and methodological requirements in ISO 14025:2010 and reference standard.

I confirm that the company-specific data has been examined as regards plausibility and consistency; the declaration owner is responsible for its factual integrity and legal compliance.

I confirm that I have sufficient knowledge and experience of construction products, this specific product category, the construction industry, relevant standards, and the geographical area of the EPD to carry out this verification.

I confirm my independence in my role as verifier; I have not been involved in the execution of the LCA or in the development of the declaration and have no conflicts of interest regarding this verification.

HaiHa Nguyen, as an authorized verifier acting for EPD Hub Limited
